

Electric Charging at BienViennue

You can charge your electric or hybrid vehicle at our own charging station. Since this device does not keep a usage history, we apply a clear and fair fixed rate per day of stay.

Upon arrival, we charge a one-time fee based on a full charge:

- For an electric vehicle, we estimate an average of 100 kWh – enough to fully charge a larger EV such as a Tesla Model Y or a Hyundai Ioniq 5.
- For a hybrid vehicle, we estimate an average of 15 kWh – suitable for a full charge of most plug-in hybrids.

For each extra night you pay a fixed daily rate based on an estimated average consumption (we estimate this at 30 kWh (Full EV) / 15 kWh (Hybrid)).

The exact price depends on the electricity rate per kWh we pay at that time. We add a margin that allows us to offer this service sustainably, while still being cheaper for you than public charging.

That way, you know exactly what to expect – no surprises afterwards.
